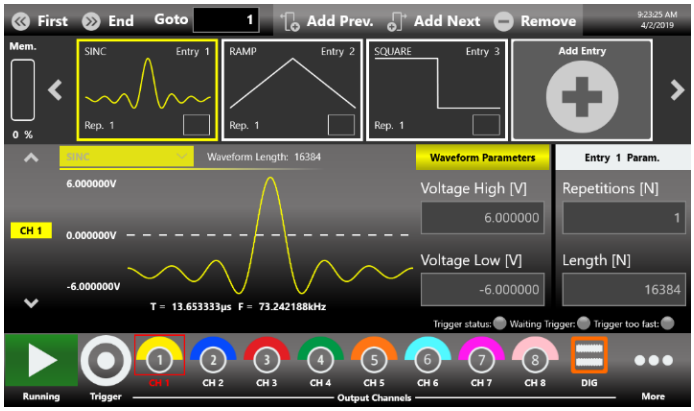
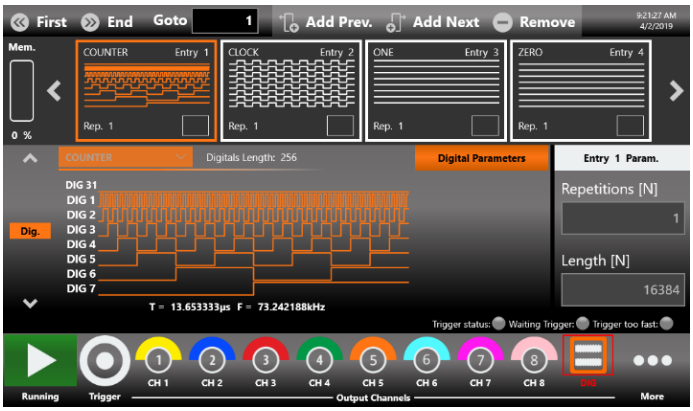
Simple Rider TrueArb: AWG Mode Interface

In **Simple Rider True-Arb** interface, the users can define complex waveforms with up to 16,384 sequence entries of analog waveforms and digital patterns, define their execution flow by means of loops, jumps and conditional branches.
Digital output combined and synchronized with analog output signals represent an ideal tool to troubleshoot and validate digital design. The waveform memory length of up to 1 GSamples on each channel combined with up to 16,384 and up to 4,294,967,294 repetitions, make the Arb-Rider 4012/4014/4018 the ideal generator for the most demanding technical applications.
Thanks to the intuitive and easy waveform sequencer user interface, the most complex waveform scenarios can be created with just few screen touches.
Up to 4 instruments can be synchronized together in order to obtain a 32 analog – 128 digital channel generator. A dedicated synchronization bus guarantees the intra-chassis synchronization. This feature is available on AWG4018 model only Arb Rider supports the standard Ethernet interface for remote control and easy customized instrument programming.





Simple Rider SPG: Serial Pattern Generator (SPG) Mode Interface – *Optional*
